

HEALTH RECORD MANAGEMENT & HEALTH MEASURES WITHOUT COMPROMISE

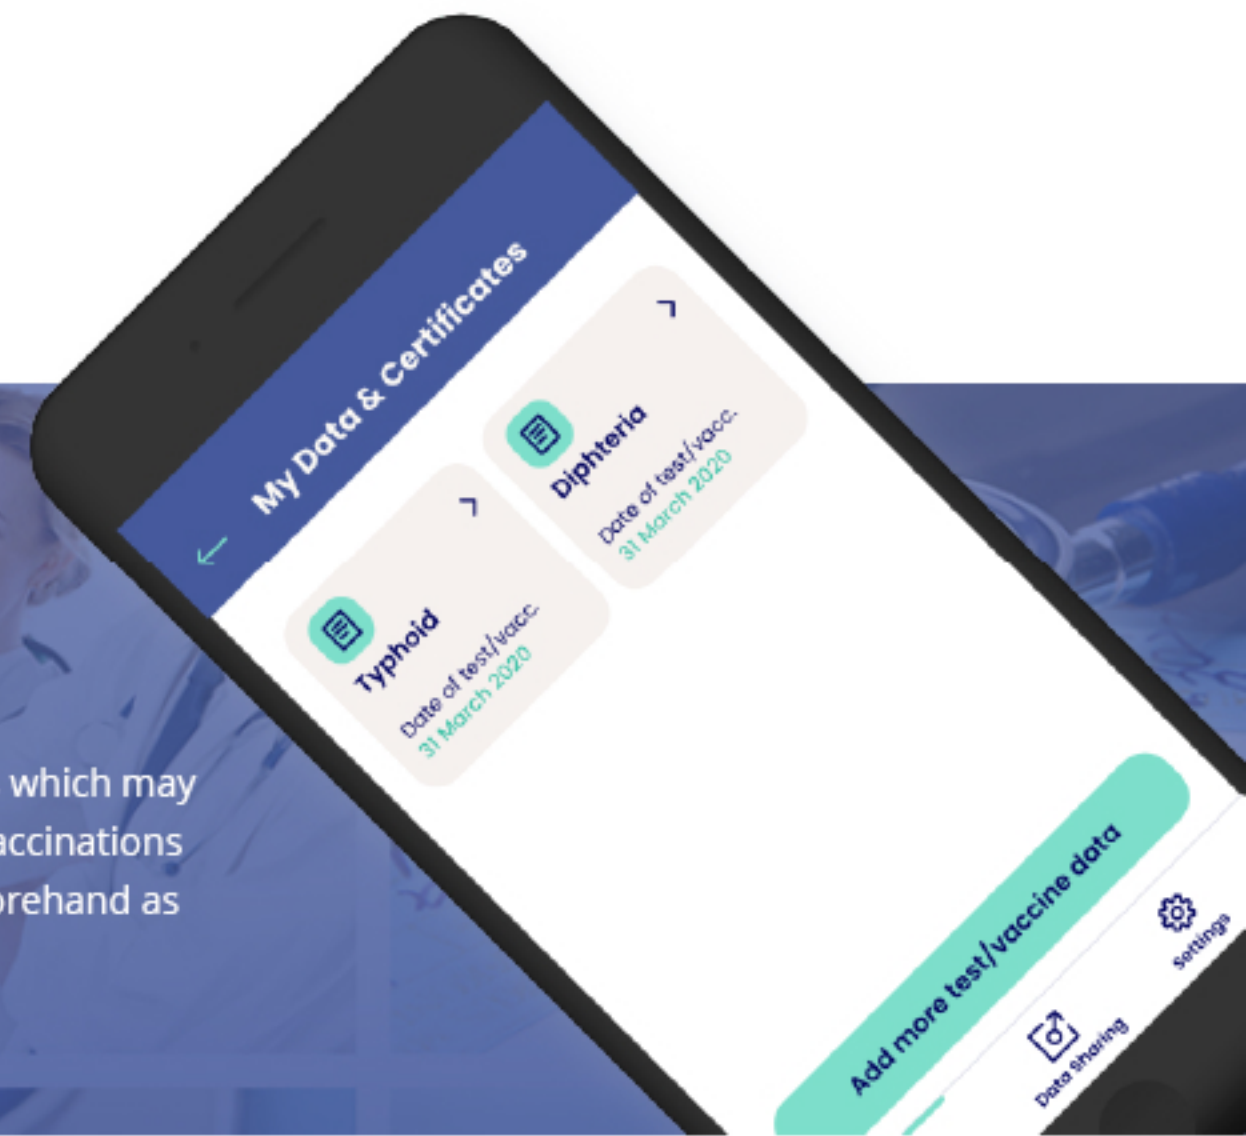

THE CLIENT

Delfin Health is a citizen-centric platform that provides health data and it enables citizens to securely access, control, and share their data with experts and doctors for further treatments to be carried out if necessary.

It also helps you to detect chronic diseases through predictions to the registered citizens as it possesses a health resource library.

PROJECTION AND GOAL

The aim was to guide and secure information of any basic health-related tests which may be COVID-19 (PCR/ANTIGEN), POLIO, PNEUMONIA, TETANUS, CHICKENPOX vaccinations for the citizens and also to keep on notifying them to cater health issues beforehand as per their medical backgrounds.

PROBLEM & SETBACK

There was no such kind of a platform generated by Delfin Health to achieve the basic goal therefore, it was necessary to develop a framework that would cater to all the essential proceedings in a fine and decent way thereby facilitating the patients and citizens to the maximum. For that purpose, RNDTEK sketched the design of "Klarity", without comprising the day-to-day care of patients in a complex, clinical care environment.

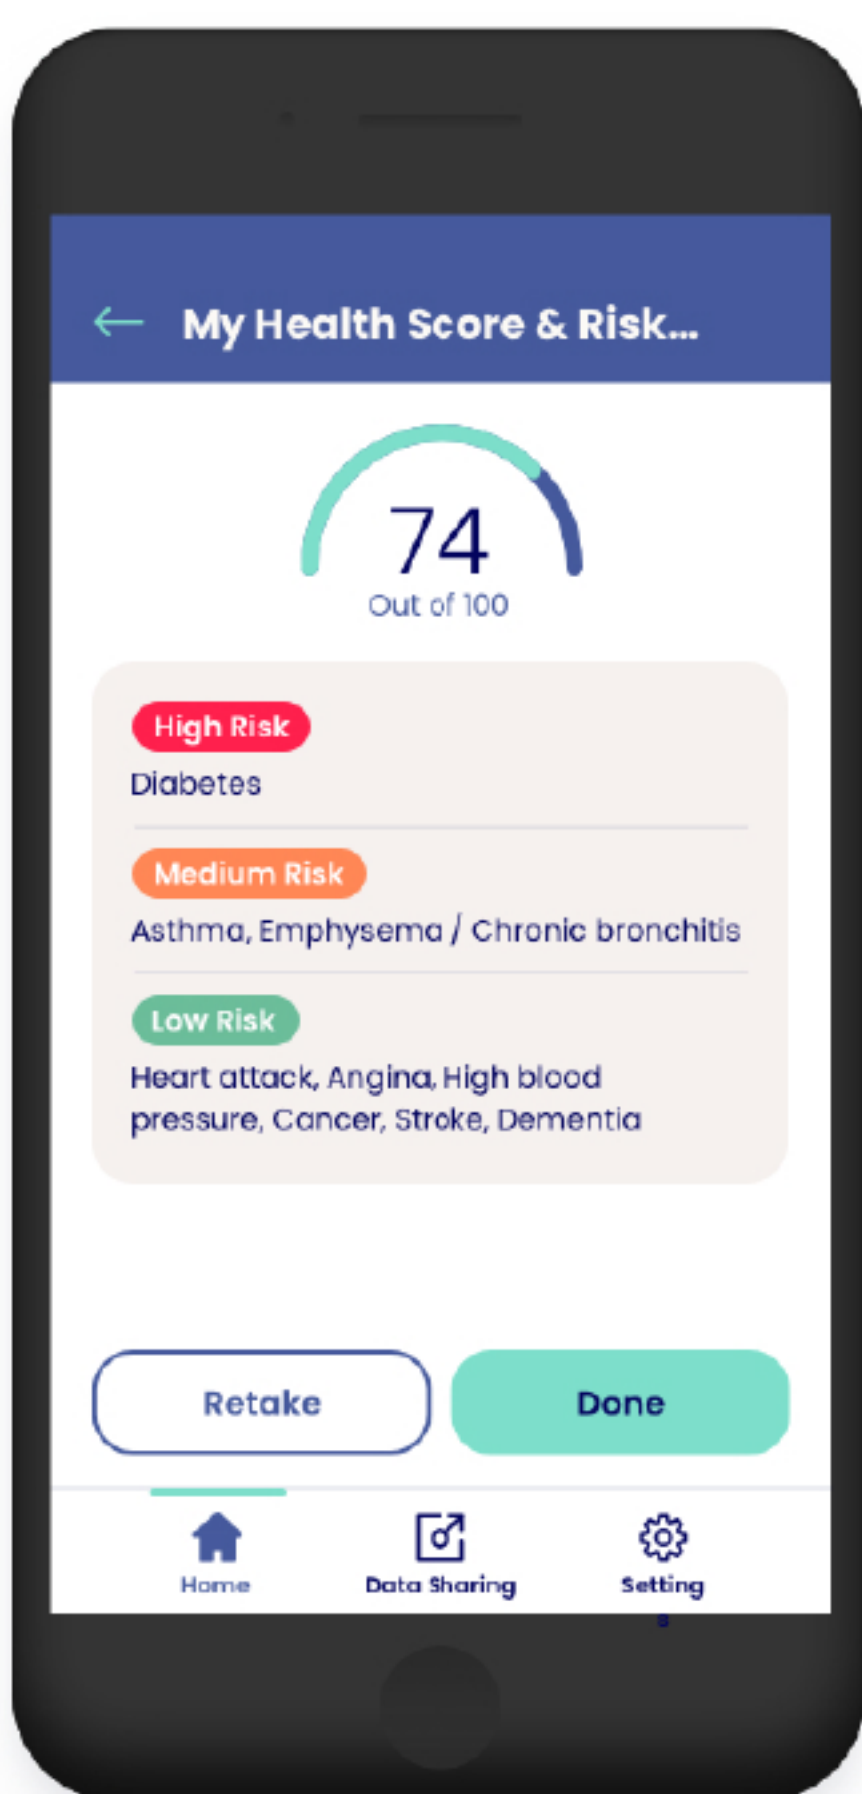

THE INTERVENTION OF KLARITY

Klarity is a risk management health solution that empowers the users to gather, store and share their personal medical and lifestyle data. To protect data privacy, the art of technology has been used to distribute storage, blockchain, and smart contracts to enable secure sharing with the consent of the citizens.

- It allows you to access your risk assessment testing and vaccine information all in one place and with notifications. The user can control testing and vaccine information and health data due to which it becomes easier to manage one's own health and maintain a healthy lifestyle.
- The user can obtain a health score that can be shared with a third party.
- Privacy is completely projected with the latest encryption technology to control the personal data of the users.
- Health score data can be shared with family and doctors along with keeping track of how that particular data is being used.
- The stored data is only accessible by those that a user authorizes to; when needed.
- The collected data gives the user a complete picture of their current vaccination status with the reminder service for renewals.

As a primary technology provider to the client, RNDTEK provided Delfin Health with a complete framework of keeping proper records of the patients due to which citizens are empowered to take a more proactive approach in improving their own health by gathering all the basic information in one place while keeping it private and safe.
